SharePerks Tracking Setup Guide

Google Analytics · Google Ads · Meta Ads

SharePerks Version 1.0 · August 2026 · For Marketing & Growth teams

> **Purpose of this guide**
> The SharePerks mobile app already sends tracking events. This document tells you *what is ready*, *which IDs and event names to use*, and *exactly what to configure* in Google Ads and Meta so campaigns can optimize on installs, sign-ups, logins, and purchases.

1. Quick status

Area	Status	Who acts
Events inside the app (Google Analytics + Meta)	**Ready**	Product (done)
App IDs, store links, deep links, consent, UTMs	**Ready**	Product (done)
Mark / import conversions in Google Ads & Meta	**Action needed**	Marketing
Link GA4 / Firebase to Google Ads	**Action needed**	Marketing
Connect Meta App to Meta Ad Account	**Action needed**	Marketing
MMP (AppsFlyer / Adjust / Branch / Singular)	Pending	Marketing + Product

2. App & store details (copy these)

or `https://www.shareperks.in/…`

Item	Value
Android App ID (package name)	`com.shareperks`
iOS Bundle ID	`com.shareperks`
Google Play Store	https://play.google.com/store/apps/details?id=com.shareperks
Apple App Store	https://apps.apple.com/in/app/shareperks/id6746847398 (Apple ID: 6746847398)
Deep link (custom)	`shareperks://…`
Deep link (web)	`https://shareperks.in/…`

Google Analytics / Firebase

Item	Value
Firebase project	`shareperks-8269f`
GA4 Measurement ID	`G-WVB4HMKPXX`
Android Firebase App ID	`1:681535457811:android:01aed961d05e9a801e0de6`
iOS Firebase App ID	`1:681535457811:ios:db01d9b8a2fc92921e0de6`

Meta Ads

Item	Value
Meta App ID	`1558786092457844`
Meta Client Token	`2648bf4715f176d02dcbf821f682e558`

> **Confidential:** Treat the Meta Client Token as internal. Share only with ads / ops team members who need it. Do not post it in public docs or social channels.

3. Conversion events to use

The app already sends these events. Marketing must mark them as conversions so campaigns can bid on them.

Business goal	Google Ads / GA4 event	Meta Events Manager event	Recommended?
Install / First open	`first_open`	Activate App `fb_mobile_activate_app`	**Yes** — primary for app installs
First open (extra)	`sp_first_open`	Activate App (same as above)	Optional
Registration (new user completes profile)	`sign_up`	Complete Registration `fb_mobile_complete_registration`	**Yes**
Login (returning user)	`login`	`Login`	Optional
Purchase (gift card payment)	`purchase`	`Purchase`	**Yes** — for value / ROAS bidding

> **Purchase note:** When available, purchase events include amount and currency `INR`. Use them for value-based bidding in Google Ads and Meta.

4. Google Ads — step-by-step

1 Open Google Analytics (GA4)

1. Go to analytics.google.com and open the SharePerks property linked to Firebase project `shareperks-8269f` (Measurement ID `G-WVB4HMKPXX`).
2. Confirm you can see recent app data under **Reports** → **Realtime** after a test install (may take a few minutes).

2 Mark key events in GA4

1. In GA4 go to **Admin** → **Data display** → **Events**.
2. Find each event below and turn on **Mark as key event**:

- `first_open`
- `sp_first_open` (optional)
- `sign_up`
- `login` (optional)
- `purchase`

3 Link GA4 / Firebase to Google Ads

1. In Google Ads go to **Tools** → **Data Manager / Linked accounts** (or **Tools** → **Setup** → **Linked accounts**).
2. Link **Google Analytics (GA4)** / Firebase to your Google Ads account using property `G-WVB4HMKPXX`.
3. Allow import of site/app metrics and conversions.

4 Import conversions into Google Ads

1. In Google Ads go to **Goals** → **Conversions** → **Summary**.
2. Click **New conversion action** → **Import** → **Google Analytics 4 properties**.
3. Select and import: `first_open`, `sign_up`, `purchase` (and optionally `login` / `sp_first_open`).
4. Set primary conversions for bidding (recommended primary: `first_open` for install campaigns; `purchase` or `sign_up` for engagement / value campaigns).

5 Create App campaigns

1. Create a Google Ads **App campaign**.
2. Android package: `com.shareperks`
3. iOS app: use store URL / Apple ID `6746847398`
4. Choose the imported conversion goals from step 4.

5. Meta Ads — step-by-step

1 Confirm the Meta app

1. Open Meta for Developers.
2. Select app ID `1558786092457844`.
3. Under settings, confirm Android package `com.shareperks` and iOS bundle `com.shareperks` are added.

2 Connect to Events Manager / Ad Account

1. Open Meta Events Manager.
2. Select the SharePerks app (`1558786092457844`).
3. Confirm the app is linked to the correct Meta Ad Account (agency access is already granted).

3 Verify events are arriving

1. Install a release or internal test build of SharePerks.
2. Open the app, complete OTP login / signup, and (optionally) a test purchase flow.
3. In Events Manager → **Test events** / Overview, look for:
    - Activate App
    - Complete Registration
    - Login
    - Purchase

4 Mark conversions

1. In Events Manager, open each event above.
2. Set as **conversion** for your Ad Account.
3. Recommended for bidding: **Activate App**, **Complete Registration**, **Purchase**.

5 Create Meta App campaigns

1. In Ads Manager create an **App** campaign / advantage+ app campaign.
2. Select app `1558786092457844` / SharePerks.
3. Choose the conversion events you marked in step 4.
4. Use the Play Store and App Store URLs from Section 2.

6. How to write campaign links (UTMs)

Always add UTM parameters on landing pages and deep links so reports show which campaign drove the user.

Supported parameters

- `utm_source`
- `utm_medium`
- `utm_campaign`
- `utm_content`
- `utm_term`
- `gclid`

  (Google click ID — usually added automatically by Google Ads)

Example links

Use case	Example
Web / landing	`https://shareperks.in/?utm_source=google&utm_medium=cpc&utm_campaign=android_install_q3`
Deep link	`shareperks://home?utm_source=meta&utm_medium=paid&utm_campaign=ios_signup`

> The app stores these UTM values and attaches them to later events (including sign-up and purchase), so you can see full-funnel performance by campaign.

7. How to verify tracking is working

Google

1. Install the app from an internal track or Play/TestFlight build.
2. Open Firebase Console → Analytics → **DebugView** (or GA4 Realtime).
3. Confirm you see `first_open` / `app_opened`.
4. Complete signup → look for `sign_up`.
5. Complete a purchase → look for `purchase`.

Meta

1. Open the same test build.
2. In Events Manager use **Test events**.
3. Confirm Activate App on launch.
4. Confirm Complete Registration after profile setup.
5. Confirm Purchase after a successful gift-card payment.

> **Timing tip:** Debug / Test streams show events within seconds. Full standard reports in GA4 and Meta can take 24–48 hours to populate.

8. Consent & privacy (for awareness)

- Users can turn off **Share usage data** in the SharePerks Settings screen.
- When off, Google Consent Mode and Meta advertiser tracking are restricted.
- No action needed from marketing unless Legal requests a different CMP later.

9. Still pending (not blocking launch)

Item	Status	Next step
MMP (AppsFlyer / Adjust / Branch / Singular)	Not started	Marketing picks a partner → Product integrates → Link Google Ads & Meta inside the MMP
Verified Universal Links / App Links hosting	App ready; domain files may be needed	Hosting team publishes `assetlinks.json` and Apple `apple-app-site-association` on shareperks.in
Agency Google Ads account access	Confirm if needed	Share Google Ads access with agency (Meta agency access already done)

10. Marketing checklist (print & tick)

Done	Task
☐	Confirm access to GA4 property `G-WVB4HMKPXX` / Firebase `shareperks-8269f`
☐	Mark key events in GA4: first_open, sign_up, purchase
☐	Link GA4/Firebase to Google Ads
☐	Import conversions into Google Ads
☐	Confirm Meta App `1558786092457844` linked to Ad Account
☐	Mark Meta conversions: Activate App, Complete Registration, Purchase
☐	Run a device test and confirm events in GA4 DebugView + Meta Test events
☐	Add UTM parameters on all campaign URLs
☐	Launch first App campaign (Google and/or Meta) using store URLs above
☐	(Later) Decide MMP partner and request product integration
